1 in. (25.4 mm) glass-mat Type X panels with moisture and mold resistance for use in shaft walls and area separation wall systems

• Feature a noncombustible, moisture-resistant gypsum core that is encased in a fiberglass face and back that shed water
• Suitable for use in pre dry-in and similar applications of panels before the building envelope is fully enclosed
• Double-beveled edges for easy installation
• Quick score-and-snap, no sawing or special tools required
• Comprehensive product and system testing assures long-term performance and safety
• Comply with ASTM C1658, Standard Specification for Glass Mat Gypsum Panels, for 1 in. (25.4 mm), Type X and glass mat water-resistant shaftliner gypsum panel
• Score a “10” when tested in accordance with ASTM D3273, Standard Test Method for Resistance to Growth of Mold on the Surface of Interior Coatings in an Environmental Chamber
• Underwriters Laboratories Inc. (UL) Classification as to fire resistance, surface burning characteristics and noncombustibility
• Guaranteed for five years against manufacturing defects and have a 12-month limited-exposure warranty
• Achieved GREENGUARD Gold Certification and qualifies as a low VOC emitting material (meets CA 01350)

| TRACI V2.1 ENVIRONMENTAL IMPACTS (CRADLE-TO-GRAVE) | 
|-----------------|-----------------|
| Functional Unit – 1,000 sf (92.9 m²) |  |
| Global Warming Potential (kg CO₂ eq.) | 8.20E+02 |
| Ozone Depletion Potential (kg CFC-11 eq.) | 1.52E-07 |
| Acidification Potential (kg SO₂ eq.) | 1.78E+00 |
| Eutrophication Potential (kg N eq.) | 1.26E-01 |
| Photochemical Ozone Creation Potential (kg O₃ eq.) | 3.35E+01 |
| Abiotic Resource Depletion Potential Fossil Fuels (MJ, LHV) | 1.76E+03 |

For over a century, sustainable practices have naturally been an inherent part of our business at USG and CGC. Today, they help shape the innovative products that become the homes where we live, the buildings where we work and the arenas where we play. From the product formulations we choose, to the processes we employ, USG and CGC are committed to designing, manufacturing, and distributing products that minimize overall environmental impacts and contribute toward a healthier living space. We believe that transparency of product information is essential for our stakeholders and Environmental Product Declarations (EPDs) are the next step toward an even more transparent USG and CGC. For additional information, visit usg.com, cgcinc.com and usg.ecomedes.com.
This declaration is an Environmental Product Declaration (EPD) in accordance with ISO 14025 and ISO 21930; 2007. EPDs rely on Life Cycle Assessment (LCA) to provide information on a number of environmental impacts of products over their life cycle. Exclusions: EPDs do not indicate that any environmental or social performance benchmarks are met, and there may be impacts that they do not encompass. LCAs do not typically address the site-specific environmental impacts of raw material extraction, nor are they meant to assess human health toxicity. EPDs can complement but cannot replace tools and certifications that are designed to address these impacts and/or set performance thresholds – e.g. Type 1 certifications, health assessments and declarations, environmental impact assessments, etc. Accuracy of Results: EPDs regularly rely on estimations of impacts, and the level of accuracy in estimation of effect differs for any particular product line and reported impact. Comparability: EPDs are not comparative assertions and are either not comparable or have limited comparability when they cover different life cycle stages, are based on different product category rules or are missing relevant environmental impacts. EPDs from different programs may not be comparable.

DECLARATION NUMBER: EPD 261

PROGRAM OPERATOR: ASTM International – 100 Barr Harbor Drive, West Conshohocken, PA USA

DECLARATION HOLDER: USG Corporation - 550 W. Adams St., Chicago, IL USA

DECLARED PRODUCT: 1 in. (25.4 mm) Sheetrock® Brand Glass-Mat Liner Panels Mold Tough®

REFERENCE PCR: NSF, Product Category Rules for Gypsum Panel Products, v1.1, April 2020

DATE OF ISSUE: 10/8/21

PERIOD OF VALIDITY: 5 Years

CONTENTS OF THE DECLARATION: This EPD is complete and contains the following:
- Product System Documentation
- Life Cycle Calculation Rules
- Life Cycle Assessment Results
- Further Information
- References

This declaration was independently verified in accordance with ISO 14025 and ISO 21930:2017

This life cycle assessment was independently verified in accordance with ISO 14044 and the reference PCR by:

Thomas P. Gloria, Industrial Ecology Consultants
1. Product System Documentation

1.1 Product Description and Product Identification

Sheetrock® Brand Glass-Mat Liner Panels Mold Tough® (UL Type SLX) are 1 in. (25.4 mm) Type X glass-mat liner panels with moisture and mold resistance for use in shaft wall and area separation wall systems. The panels feature a noncombustible, moisture-resistant gypsum core that is encased in a fiberglass mats face and back that shed water. When tested in accordance with ASTM D3273, Standard Test Method for Resistance to Growth of Mold on the Surface of Interior Coatings in an Environmental Chamber, the panels score a "10" (highest). The fiberglass facer is folded around the double-beveled long edges to reinforce and protect the core, and the ends are cut square and even. The panels are UL Classified for fire resistance and can be used in any UL Design in which Type SLX panels are listed.

1.2 Designated Application

- Commercial or residential applications where 1 in. (25.4 mm) moisture- and mold-resistant Type X shaftliner panels are required
- Areas where glass-mat panels are desired
- Load-bearing and nonload-bearing wood- or steel-framed fire-rated walls and ceilings
- Elevator, stair, mechanical, solid and horizontal stud shafts
- Shaftwall ceiling membranes
- Unlined air return ducts
- Fire-resistive protection in common walls for townhouse construction applications

1.3 Product Technical Data

1.6 Product Manufacture

The manufacture of gypsum panel products start with the combining of the dry ingredients in a screw conveyor, feeding of this dry ingredient mixture into a pin mixer where these dry ingredients are mixed with water and wet additives. The resulting slurry is fed between two glass mat facers. The wet gypsum panel is allowed to hydrate after which the hard panel is cut and transferred into a kiln for evaporation of excess water. After removal of the evaporative water, the panel is cut to its final size and the resulting product is ready for shipment. Any gypsum panel product not meeting quality control specifications is disposed of in an appropriate landfill.

![Figure 1: Process diagram for the production of glass mat gypsum panel products](image-url)
1.7 Environment and Health During Manufacturing

USG and CGC have led the building sector’s effort in developing and supplying sustainable construction materials. Today, sustainability is integrated into the design and manufacture of every wall, ceiling, and flooring product. As both a producer and a buyer of raw materials, we have a responsibility to extensively review and select each material we use. Each decision we make is based on careful consideration of environmental and safety effects over time. Raw materials used in our products are carefully selected and go through a screening procedure. Incoming raw materials are tested for contaminants by an internal lab and third-party labs for consideration of use and worker, environmental, and end-user exposure. This due diligence helps to ensure our products are safe to handle in our manufacturing plants and on job sites while having minimal impact on occupant health and indoor and outdoor environments.

1.8 Packaging

Panels are individually stacked to a predetermined amount. A quantity of units are collected and placed on sleutters (i.e., spacers) for easy pick-up by fork lift trucks.

1.9 Distribution

The default distances from the PCR for both truck 280 miles (451 km) and rail 130 miles (209 km) transport were used in this analysis. Final transportation from the distribution gate to the construction site was defaulted to 25 miles (40 km) by a single unit truck with an empty backhaul.

1.10 Product Installation

As dictated by the PCR, “the default on-site installation waste” scenario for gypsum panel products was 10% on a surface area basis of gypsum panel product. A 10% installation waste factor was adhered to in this LCA analysis.

Installation of the gypsum panel product into the building includes the manufacture and transportation of ancillary inputs and any energy or water required for installation or operation of the construction site. The installation stage included provision of all materials (none required; product is friction fit) and energy required to install the product per industry standards. Energy required during installation of this product is predominantly manual labor with minimal electricity which has been omitted in this analysis.

1.11 Environment and Health During Use Stage

Under normal conditions of intended use, this material does not pose a risk to the environment or occupant health.

1.12 Reference Service Life

A default RSL of 75 years shall be assumed for the product. An assumed Estimated Service Life (ESL) of 75 years shall be used for building life.
1.13 End-of-Life

Currently, gypsum panel products are typically disposed of in a building and construction landfill. In certain areas, USG has agreements with third-party gypsum waste recyclers who collect gypsum construction waste at jobsites for recycling and then transport this post-consumer gypsum raw material to specific USG manufacturing plants for use in the manufacturing of new gypsum panel products. There are several alternative options to landfilling such as the use of reground gypsum panels for soil amendment applications. Contact your local EPA for reuses rules and regulations.

1.14 Documentation on Additional Environmental Information

1 in. (25.4 mm) Sheetrock® Brand Glass-Mat Panels Mold Tough® have achieved GREENGUARD Gold Certification and qualifies as a “Low Emitting” material per California Department of Public Health CDPH/EHLB/Standard Method (CA Section 01350) for school classroom, and private office modeling scenarios, and meets USGBC’s LEED® v4 emission requirements.

2. LCA Calculation Rules 2.1 Functional Unit

The functional unit for this LCA study is 1,000 sf (92.9 m²) of product. This functional unit is consistent with the PCR.

Table 3: Functional unit

2.2 System Boundary

This cradle-to-grave (A1-C4) LCA study covers all the production steps from raw materials extracted from the earth (the cradle) to pallets of gypsum panel products ready to be shipped from the plant as well as distribution, installation, use and end of life stages (the grave).
2.3 Estimates and Assumptions
1 in. (25.4 mm) Sheetrock® Brand Glass-Mat Panels Mold Tough® raw material and energy inputs are specific to the products produced at the relevant manufacturing plants.

2.4 Cut-off Criteria
The cut-off criteria for input flows to be considered within each system boundary were as follows:

- Mass – if a flow is less than 1% of the cumulative mass of the model flows it may be excluded, providing its environmental relevance is minor.
- Energy – if a flow is less than 1% of the cumulative energy of the system model it may be excluded, providing its environmental relevance is minor.

The sum of the excluded material flows must not exceed 5% of mass, energy, or environmental relevance.

2.5 Background Data
All background was sourced from critically reviewed GaBi databases.

2.6 Data Requirements and Data Sources
Manufacturer specific data was obtained from each relevant manufacturing plant in the United States. The LCA model was created using GaBi ts software. Specific comments related to data quality requirements cited in ISO 14025 Section 4.2.3.6.2 include the following:

- Temporal: In the case of 1 in. (25.4 mm) Sheetrock® Brand Glass-Mat Panels Mold Tough®, the LCI data was collected from the relevant manufacturing plants for the 2019 calendar year.
Geographical: Where possible, all processes were chosen as being representative of U.S. manufacturing processes.

Technical: The data selected for this study is specific to the technology used in the preparation of the raw materials.

Precision: The raw material usage amounts were derived from plant quality data on finished products and product formulas.

Completeness: Virtually all the significant raw material flows (> 99%) used for panel production has been modeled. The exception consists of transportation of the coating raw materials; the effect of which was determined to be less than 1% of the total.

Representative: Where possible all the data sets were selected to be representative of U.S.-based production, are less than 10 years in age and are representative of the technology being employed.

Consistency: All the manufacturing processes were modeled in a consistent manner throughout this study in accordance with the goal and scope definitions.

Reproducibility: The information contained in this study, including raw material, energy and transportation distance inputs, have been fully documented in the LCA report.

Sources of Data: The sources for the processes used in this study have been fully provided in the LCA report and are representative of the material and energy sources used in actual production.

Uncertainty: The relative uncertainty associated with this study has been minimized. No significant assumptions have been made.

2.7 Period Under Review

All raw material and energy inputs are from the 2019 calendar year.

2.8 Allocation

The LCI data was collected for the gypsum panel product from the relevant manufacturing plants for the 2019 production year. Raw material and energy inputs were allocated to 1 in. (25.4 mm) Sheetrock® Brand Glass-Mat Panels Mold Tough® based on the mass of those panels.

2.9 Comparability

Any comparison of EPDs shall be subject to the requirements of ISO 14025:2006 section 6.7.2, ISO 21930:2017 section 5.5, and NSF Part B PCR for Gypsum Panel Products, section 5.5.

4. LCA Interpretation

The figure below graphically depicts the relative contributions for the cradle-to-grave production of 1,000 sf of 1 in. (25.4 mm) Sheetrock® Brand Glass-Mat Panels Mold Tough®. The dominant source of greenhouse gases are generated during the panel drying process. This analysis is typical for all relevant manufacturing plants covered in this study. Future reductions in Global Warming Potential should be directed at reducing the amount of water entering the dryer.
